CANOPY

The glass canopy over the terrace mainly serves as protection from adverse weather conditions, such as rain, snow or strong sunlight. The canopy system is designed for different types of construction, such as: single-sided, double-sided, three-sided.

Glass is a modernist material with extraordinary functionality. The glass panes of the canopy, depending on your choice, can have a self-cleaning or sun control coating. We recommend using a concealed or traditional gutter drainage system.

Size

Max. roofing length 5 m.
Width unlimited

Safety

Laminated and tempered safety glass
with the thickness of: 55.2, 66.2, 88.2

RAL palette

Natural anode, anthracite (RAL 7016), white aluminium (RAL 9006). Any system colour from RAL*

*available on request

Functionality

Self-cleaning coating, sun control coating

VARIANTS OF GLASS WALLS

Side wall construction provides for a wide range of possibilities. Options include a fixed partition wall, UL all-glass railing, top-mounted hybrid railing. These types of railings can also be configured in conjunction with sliding systems.

Fixed wall

UL all-glass balustrades

Top-mounted hybrid balustrade

SLIDING SYSTEMS

Glasimo systems used in conservatories allow for complete folding in the summer and individual configuration of the arrangement of glass panes, method of opening and securing against opening. We offer two types of sliding systems.

Sliding system

GRS sliding system on a UL all-glass balustrades

STEP sliding system * on a hybrid balustrades
*coming soon

GRS sliding-folding system

Accordion system allows you to provide wide open passages in a variety of arrangements, including: opening to the right or left side, so-called curtain opening to both sides of the wall. The structure folds inward into the room.

STEP sliding system *

STEP is an original product of Glasimo Projects. The revolutionary opening mechanism allows the glass panes to slide in a stacking manner, forming a consistent single plane of glass when folded.

*coming soon

See the animation of the system on YouTube

CONSERVATORY

A conservatory is an ideal solution for those who want to relax outdoors regardless of the weather conditions outside, both in the spring-summer and autumn-winter seasons. A glass terrace canopy promotes spending time outdoors. Additional protection in the form of a glass side-wall construction and the use of sliding systems allow the use of this type of structures even in colder weather.

Practicality

Year-round use

Drainage system

Traditional gutter or concealed system

Additional lighting

Possibility of installing LED lighting in the top beams of the canopy

Leakproofness

Additional seals between the glass panes
