White mirror 4 mm

The white mirror, 4 mm thick, is the most frequently used type of mirror. A 5 mm thick mirror, i.e. stronger than the standard one, is used for much larger sizes and when the mirror could be exposed to greater loads or the risk of damage.

The mirror quality is of great importance, which is why the material from which is made is resistant to corrosive factors in bathrooms - the reflecting layer of silver is protected against moisture. Mirrors can be covered by special protective film to reduce the risk of injury in the event it is broken.

Shape and colour

We also offer coloured mirrors, where body-tinted glass in white, graphite and brown is used. Mirrors with both standard and irregular shapes, such as ellipse, hexagon, triangle, are immensely popular among customers. The maximum size of a white mirror plane is 2550 x 3210 mm.

Edge work, chamfering

Mirror edges can be chamfered, which means a wide decorative cut along the mirror edge, and ground, which means the finishing of the surface of the mirror edge. The edge work is available in two variants: polished or matt, thanks to which the product is characterized by high aesthetic quality.

Glass decoration

It is difficult to imagine a bathroom interior without a mirror, which in addition to its practical function, also plays an extremely important role in the room design.

Large wall mirrors visually enlarge the space and make it brighter. The glass bottom template can be covered with a decoration in the form of a multi-colour digital print made with the use of vitreous enamel. Its surface, thanks to toughening, is durable and resistant to damage. Then a mirror is glued to this glass element. The Glasimo brand offers 200 print patterns, as well as custom designs.

The unique mirror designs are another reason to learn about the latest trends. The collection, which is a combination of a mirror with glossy lacquered, matte, and ornamental glass, can complement the room and harmonise with the bathroom decor. Full colour choices are available at www.colorimo.co.uk

In accordance with the applicable principles of design and interior fit-out, it is worth choosing models that fit the overall style of an interior.

The mirror in the bathroom is not only a practical fit-out item, which is useful in the everyday toilet, but also constitutes a clear decorative item that accentuates the character of the room.

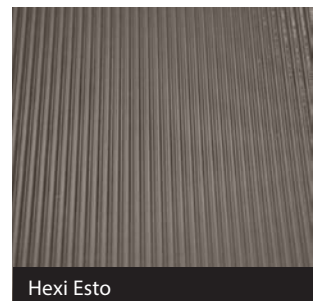

Large mirrors enclosed in a decorative frame are becoming more and more popular. By placing this type of element in a bathroom of subdued colours, we will create a central point that gives an intriguing character to the design. Mirror frames are sometimes finished with a glass frame. Full colour choices are available at www.colorimo.co.uk

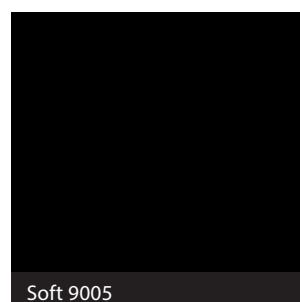

Both glossy lacquered glass and ornamental textured lacquered glass are used for this purpose. The shape of a bathroom mirror is a matter of individual choice. Even though rectangular and round panes are the most popular ones, it is worth experimenting with the shape.

The mirror is the centrepiece of the bathroom, it is an item that adds to the character of the bathroom, which can impart sensuality, radiance, or temperament. Combining a white mirror and a graphite mirror will shape the space and change the visual perception of the room.

Optical design tricks with the use of a mirror allow you to turn flaws of an interior into its strengths or cover them up in a discreet way. It is also worth remembering to treat colour mirrors as decorative items and white mirrors as functional ones
